Analyze

SimCheckIN™ collects the data you need, when you need it.

Card readers integrated with SIMULATIONiQ Enterprise help to reduce long check-in lines and capture data, such as participant and session information. For manual and card reader workflows, SimCheckIN makes it easy to summarize collected data and generate customizable reports on sim center usage, key performance indicators (KPIs), and more. You can also manually check-in by entering session name, time, and room using the SimCheckIN administration screen for a workflow without a card reader.

Smarter Simulation. Better Outcomes.™
